

Technical Tip

PerformMax® 500 Overlay Surface Repair

The Ovation® overlay material that has been thermally bonded to the engineered wood substrate of PerformMax 500 flooring is very durable, and will resist scratches and abrasions during ordinary use conditions. However, in the event that scratches or abrasions do occur, this condition can be easily repaired using one of the following products.

Loctite® Metal/Concrete Epoxy is available at hardware and home center stores. The product is a dark gray color and dries quickly.

Bondo® Metal Filler is available at auto parts retailers. The product is a dark pink color and dries quickly.

Both products have excellent adhesion to the PerformMax 500 panel, and are resistant to moisture, heat and cold. The products are paintable using an oil based primer and if so desired an acrylic latex topcoat. Using these products on the PerformMax 500 panel does not affect its 25 year Industrial limited warranty. When using these products, be sure to follow the manufacturer's instructions for use.
